Test Cases

App Launch & Login 6

This section validates the app startup process and user login functionality, ensuring players can launch the game and access their account smoothly without errors.

C75: Application launches successfully

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

- App installed
- Internet connection enabled

Steps

Tap on Family Island app icon.

Expected Result

- Splash screen appears.
- Loading screen displays.
- Home screen loads without crash

C76: First-time user can start game

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

- App freshly installed
- No saved account

Steps

- Launch app.
- Tap “Play” or start option.

Expected Result

Intro tutorial begins.

C77: Existing user account loads correctly

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

- User account linked (Google/Facebook)

Steps

- Launch app.
- Login using linked account.

Expected Result

Account loads successfully.

C78: Login fails with no internet

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Internet disabled

Steps

- Launch app.
- Attempt login.

Expected Result

Error message displayed.

C79: Tutorial guides first resource collection

Type	Priority	Estimate	References
Functional	Medium	None	None

Automation Type	Is Automated
None	No
Test Case Labels	

Preconditions

New user account

Steps

- Follow tutorial instruction.
- Tap on a tree

Expected Result

Tree is chopped

C80: Tutorial crafting step works correctly

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Required materials collected

Steps

- Open crafting building.
- Select required item.
- Start crafting.

Expected Result

- Materials deducted.
- Craft timer starts.
- Tutorial proceeds to next instruction.

Core Gameplay & Energy Flow 11

This section validates the main gameplay mechanics and energy system, ensuring players can perform actions, consume energy correctly, and experience smooth game progression without balance or functional issues.

C81: Energy decreases per action

Type	Priority	Estimate	References
Functional	Medium	None	None

Automation Type	Is Automated
None	No
Test Case Labels	

Preconditions

Energy above 20

Steps

Perform chopping action.

Expected Result

- Energy reduces by correct amount.
- UI updates immediately.

C82: Energy regenerates over time

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Energy not full

Steps

Stay idle for regeneration interval.

Expected Result

- Energy increases gradually.
- Cap limit not exceeded.

C83: Action blocked when energy insufficient

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Energy lower than action requirement

Steps

Attempt to perform action.

Expected Result

Action not executed.

C95: Multiple actions deduct cumulative energy correctly

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

- Energy above 50
- Multiple collectible objects available

Steps

- Chop a tree.
- Break a stone.
- Harvest crops.

Expected Result

- Energy deducted separately per action.
- Total deduction equals sum of action costs.
- UI updates after each action.

C96: Action animation completes before reward credit

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Sufficient energy available

Steps

Perform chopping action.

Expected Result

- Animation plays fully.
- Resource added only after animation completes.
- No premature reward credit.

C97: Character does not perform action if object already cleared

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Resource object cleared

Steps

1. Tap rapidly on cleared area.

Expected Result

- No energy deducted.
- No animation triggered.

C98: Crop growth completes after defined time

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Crop planted

Steps

- Wait for growth timer.
- Tap crop when ready.

Expected Result

Crop becomes harvestable after timer.

C99: Crop cannot be harvested before completion

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Crop planted recently

Steps

Attempt to harvest before timer ends.

Expected Result

Harvest action blocked.

C100: Inventory limit handled correctly

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Inventory near maximum capacity

Steps

Collect resource exceeding capacity.

Expected Result

Collection blocked OR storage upgrade prompt shown.

C101: Game handles rapid tap input without freezing

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Multiple resources available

Steps

Rapidly tap different objects for 15 seconds.

Expected Result

- No UI freeze.
- No delayed energy update.

C102: Level progression triggers correctly

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

XP near level-up threshold

Steps

Complete action granting XP.

Expected Result

Level increases once threshold reached.

Resource Management 3

This section validates how resources (coins, gems, materials, etc.) are earned, spent, stored, and updated, ensuring accurate calculations, proper deductions/additions, and consistent synchronization across gameplay.

C84: Resource count increases after collection

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Object available to collect

Steps

Tap collectible item.

Expected Result

- Item disappears.
- Resource count increases.

C85: Resource deducted during crafting

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		

Test Case Labels

Preconditions

Sufficient materials available

Steps

Start crafting item.

Expected Result

Materials reduced immediately.

C86: Rapid tapping does not duplicate resources

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Stable internet connection

Steps

Rapidly tap resource multiple times.

Expected Result

Resource increases only once per valid action.

Crafting Completion & Quest Flow 4

This section validates the crafting process and quest progression, ensuring items are crafted successfully, timers function correctly, rewards are granted properly, and quest statuses update accurately upon task completion.

C87: Crafting completes after timer

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Item in crafting queue

Steps

- Wait until timer completes.
- Collect crafted item.

Expected Result

Item added to inventory.

C88: Game handles app restart during crafting

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Craft timer running

Steps

- Close app completely.
- Reopen app

Expected Result

Craft timer continues correctly.

C89: Quest progresses after required action

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Active quest available

Steps

Perform required action.

Expected Result

Quest progress bar updates.

C90: Reward credited after claim

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Quest completed

Steps

Tap “Claim Reward”.

Expected Result

Reward added to account.

Island Exploration Flow 6

This section validates the island navigation and exploration mechanics, ensuring players can unlock areas, clear obstacles, discover new resources, and progress smoothly without navigation errors or progression blocks.

C91: New island unlocks when requirement met

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Required level reached

Steps

- Tap on island map.
- Select unlocked island.

Expected Result

Travel animation plays.

C103: Locked island cannot be accessed prematurely

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		

Test Case Labels

Preconditions

Island unlock requirement not met

Steps

- Open map.
- Tap locked island.

Expected Result

Unlock requirements displayed.

C106: Returning to home island preserves progress

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

User completed actions on event island

Steps

- Return to main island.
- Travel back to event island.

Expected Result

- Previously cleared resources remain cleared.
- Progress saved correctly.

C107: Event island expires after timer ends

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

- Active limited-time island
- Timer close to expiry

Steps

1. Wait until timer expires.
2. Attempt to access island.

Expected Result

Island no longer accessible.

C109: Island progress syncs across sessions

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

- Account linked
- Progress made on secondary island

Steps

- Close app.
- Reopen and login.

Expected Result

- Island state restored correctly.
- No rollback of cleared resources.

C110: Map UI updates after unlocking new island

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Level-up unlock condition met

Steps

- Level up.
- Open map.

Expected Result

Newly unlocked island visible.

Interruptions & Stability 3

This section validates the game's behavior during interruptions such as incoming calls, notifications, app minimization, and network changes, ensuring gameplay resumes correctly without crashes, data loss, or progress issues.

C92: Game resumes after minimizing

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Action recently performed

Steps

- Minimize app.
- Reopen after 2 minutes.

Expected Result

Game resumes without crash.

C93: Network switch handled properly

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

WiFi connected

Steps

- Perform action.
- Switch to mobile data.

Expected Result

- Game reconnects automatically.
- No data loss.

C94: Energy never becomes negative

Type	Priority	Estimate	References
Functional	Medium	None	None
Automation Type	**Is Automated**		
None	No		
Test Case Labels			

Preconditions

Energy near zero

Steps

Attempt multiple actions rapidly.

Expected Result

- Energy stops at zero.
- No negative value displayed.
